

T285HD High Voltage Detector

Features

- T285HD is called High Voltage Detector. It is primary used to detect the presence of an alternating field.
- It shows identification of AC voltages presence.
- T285HD has 3 different ranges of sense voltage.

sense voltage	Model No.
(1) 3~7 kV	T285-AHD
(2) 6.6~11 kV	T285-BHD
(3) 10~22 kV	T285-CHD
- The LCD will "flash continuously" when high voltage is detected.
- Physical contact with electrical conductors is not necessary when testing for live wires.
- The sensor of T285HD senses the radiated field that surrounds live conductor.
- Radiated field strength increases with voltage and decreases quickly with distance.
- Large LCD display.
- Continuous monitoring.
- Easy to install.
- No batteries required.

Description

- T285HD has a large LCD that is housed in an ABS enclosure.
 - T285HD can be attached to the cable by a large metal clip and can be secured with two cable tie.
 - The high voltage detector senses the radiated magnetic field surrounding the cable and shows a Live warning sign on the LCD.
- ⚠ Do not use on armed cables.

Application

- Identify and check live cables.
- Check live wires at high voltage.
- 3 different ranges of sense voltage.

INSTRUCTION OF INSTALLATION
